

SOLTEC[®]
SOLUTIONS TECHNOLOGY

SILVER

DIESEL FUEL TREATMENT

SOLTEC SILVER is a year-round Diesel Treatment specifically formulated to maximize both performance and fuel economy. Safe for all diesel engines, including high-pressure Tier 4 fuel systems, EGR and DEF applications. Works in all grades of diesel, including Biodiesel, ULSD and all winter blends. Increased horsepower or fuel economy in northern regions, humid climates, and higher elevations. It is ideally suited for passenger vehicles, trucking, construction, mining, power generation and all typical diesel-powered applications. Soltec Silver is EPA Registered and Tier 4 Fuels Certified.

REDUCE EMISSIONS - Using Nano Technology the combustion process starts at a much lower temperature, this gives the fuel a longer burn cycle which achieves a more complete burn of the fuel. This reduces emission, increases BTU's (more power) and reduces the regen process in Tier 4 engines.

ASTM D482 Ash Reduction 50% • ASTM D189 Soot Reduction 40% • ASTM D4868 BTU Energy Output increase 10%

SUPERIOR LUBRICATION PERFORMANCE - Continuous fuel injector lubrication and scuffing with exceptional rust and corrosion protection for fuel system components.

ASTM D6079 Lubricity Improvement 49% • ASTM D6078 Scuffing Improvement 61%

ALL WEATHER FORMULA - Silver is a unique blend of premium combustion catalyst using proprietary Nano Technology, combined with an additive package specifically formulated to cover year-round diesel fuels. Winter coverage Pour Point/Gelling, Cloud Point and Cold Filter Plug Point. *ASTM D7346 Pour Point/Gelling*

FUEL STABILIZER - Prevents oxidation by reducing peroxide formation in diesel fuel (stopping sludge deposits) that are common in diesel fuel. Continuous water removal from the fuel system.

ASTM D6468 Peroxide Reduction 90% • ASTM D6304 Water Reduction 27%

APPLICATION - Pour entire 8-ounce bottle into fuel tank. Treats up to 50 gallons of diesel fuel. Use every tank fill up for continuous performance.
